

The vision - became reality

The Supply Solution

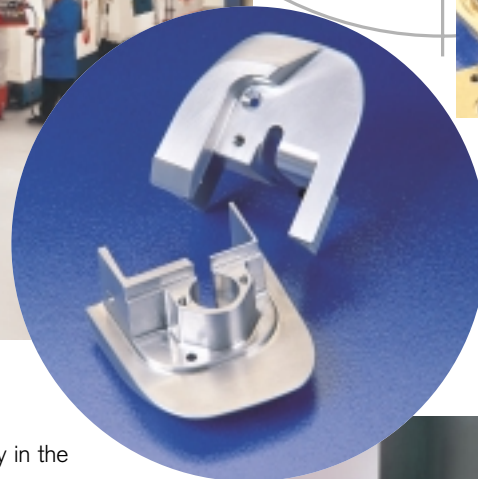

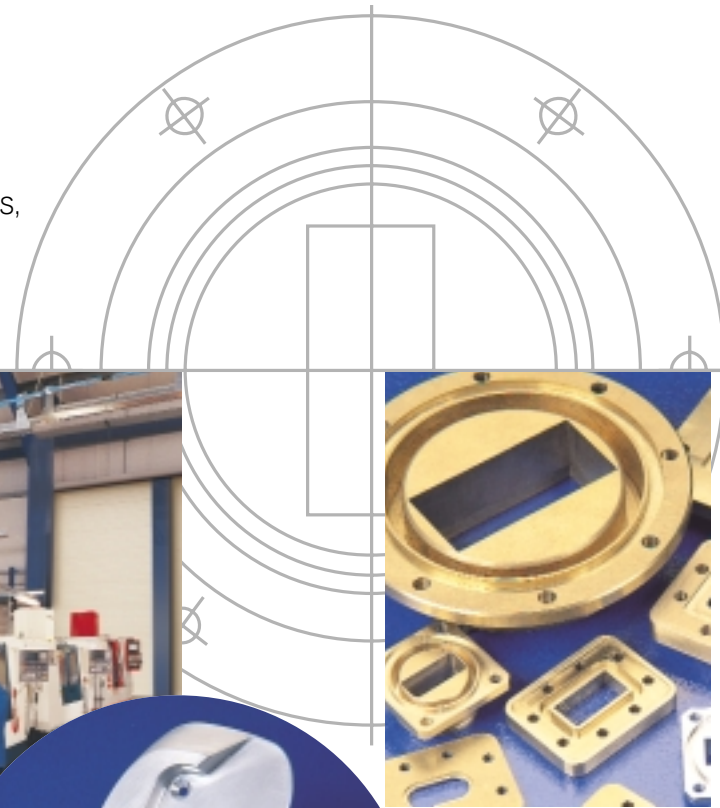

Continuous Engineering Quality

the partnership

The Supply Solution Limited (TSS) is an exciting new force in CNC machining, precision engineering, fabrication and waveguide component manufacture.

The company was formed by the coming together of the skills and expertise of many past Quasar Microwave Technology Limited (Quasar) machinists and the CNC precision engineering experience of Harbourne Engineering Limited (Harbourne).

Harbourne was formed in 1990, and proceeded to established itself as a regional heavyweight in its core strength areas of CNC machining, precision engineering and fabrication. At the time of the merger with TSS, Harbourne boasted an impressive array of clients in the aviation and automotive industries.

All the skilled staff at Harbourne have been retained and will continue to work from the 5,000 square foot purpose built facility in the Heathfield area of Newton Abbot. The newly constructed premises houses an impressive 12 CNC machining centres, including milling centres, machining & turning centres. The latest acquisition of a Bridgeport VMC1000 with a 12,000 rpm spindle further enhances the companies

capabilities. TSS's intention is to expand by investing in additional high speed, high accuracy machines over the next year. All machines will be supported by state of the art CAD/CAM systems which enables TSS to compete for the most sophisticated CNC machine work.

TSS aims to be the preferred supplier in the following core areas:

WAVEGUIDE COMPONENTS

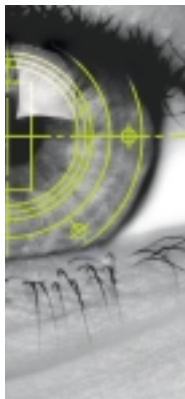

In order to service one of the leading waveguide manufacturers in the world, Quasar put in place an impressive machining facility which concentrated on mass producing waveguide accessories. TSS inherited a number of key Quasar staff to support its' goal of becoming market leader in the manufacture of these components.

Mike Jackson Managing Director and former Director of Quasar comments, "The synergy between both entities is very exciting - the experience and skills base of our staff combined with the facilities at Harbourne strategically places us in an excellent position to become market leader. The ethos of the company - one of including all members in the success of the business - has proved a major driving force in allowing us to achieve a long standing ambition of entering the waveguide component market."

CNC MACHINING & FABRICATION

TSS will build on the success of Harbourne in the aviation, automotive and related markets.

Ben Cartridge Sales Director and former Productions Manager at Quasar explains, "Our aim is to open up our capabilities to other clients in these areas whilst cross selling our products to existing clients of The Solution Group. Our customer service and responsiveness will provide the added value which we believe will set us aside from our competitors."

delivering the vision

Customer Service

TSS will develop its business through excellence in customer service.

One of the key elements needed to achieve this is to maintain a skilled and motivated workforce.

TSS includes staff in the success of the business and recognises personal development and, to this end, works in partnership with local colleges as part of the modern apprenticeship scheme.

Quality

TSS has recently been awarded ISO 9001:2000. The company is currently working to achieve ISO14001.

No.17539

Agents

The company has an extensive network of worldwide agents providing an instant and effective sales team to service your needs.
